Pitch Deck

Edubba X

Building the Future of Measurable Learning

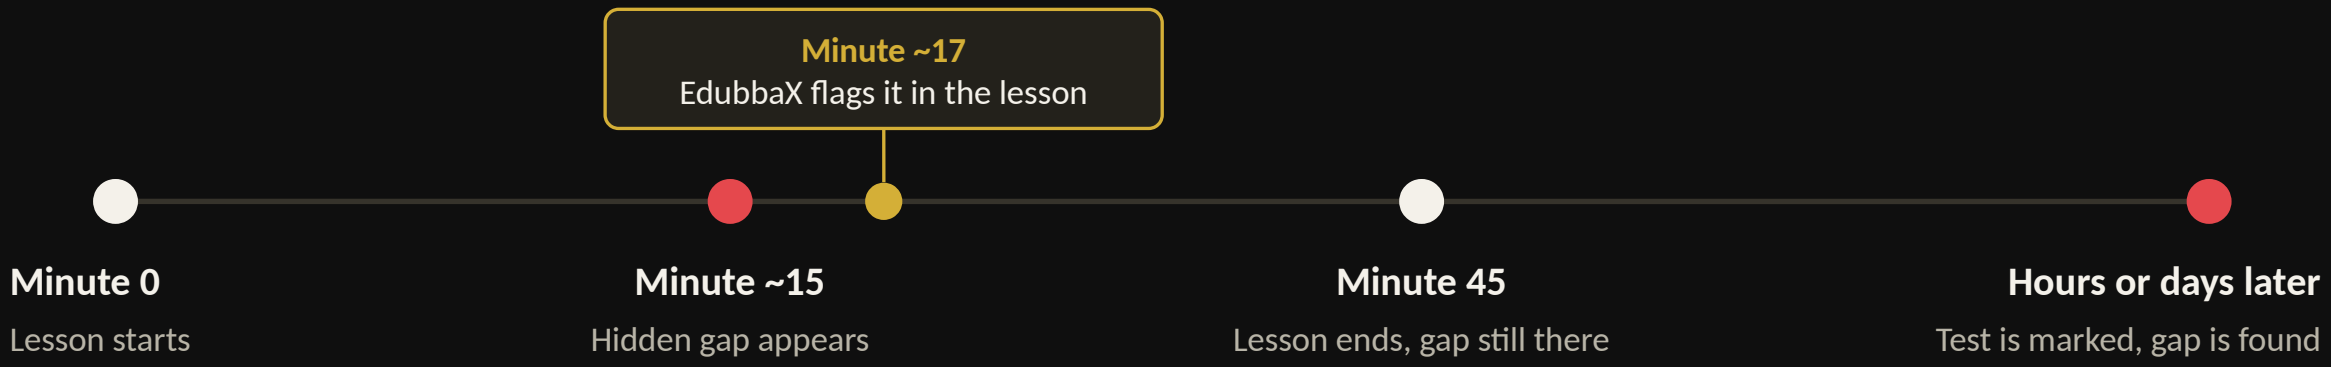

PRE-SEED ROUND

$100,000 for 11%

Omar Heydar, Founder & CEO · edubbax@gmail.com

THE PROBLEM

Education often measures learning too late.

94%

of teachers say they use formative data, but typically after the lesson is over

Instructure / Hanover Research, 2021

41 h

average teacher working week across the OECD, before the learning gap is even visible

OECD TALIS 2024

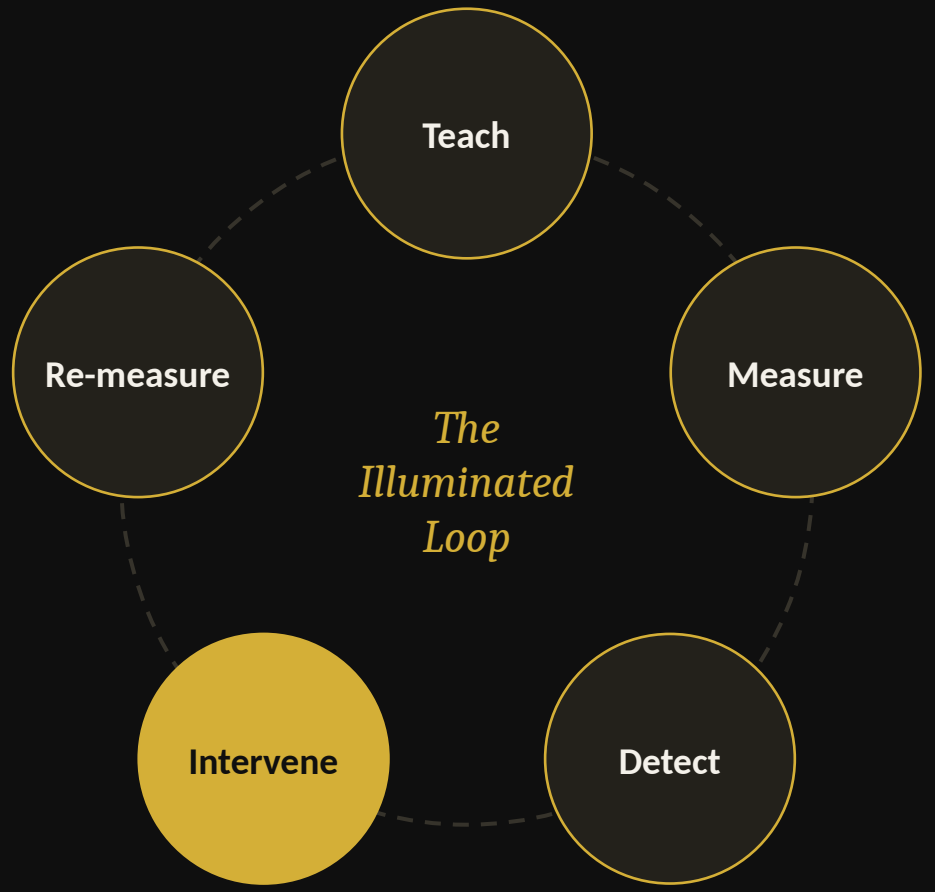

19%

of OECD teachers report feeling stress “a lot” in their job

OECD TALIS 2024

THE INSIGHT

What if every lesson could adapt while it is happening?

Teach — Teacher teaches as usual; no new workflow to learn.

Measure — Short checkpoints go to student phones during the lesson. No student accounts.

Detect — When class understanding drops below 65%, a gap alert fires with the likely misconception.

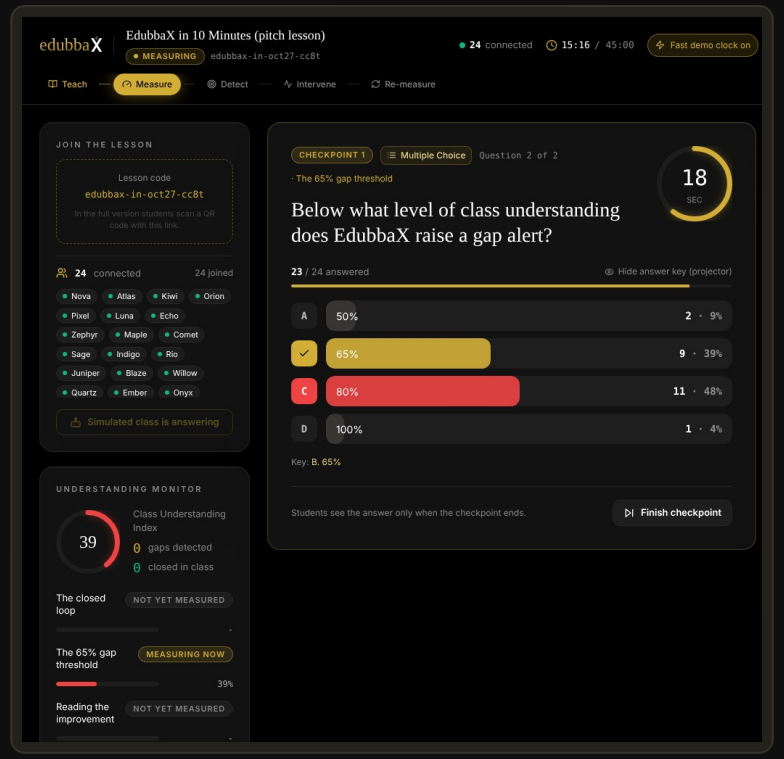

Intervene — A 2-minute, same-lesson action plan for the teacher.

Re-measure — A fresh question confirms whether the gap actually closed.

The difference is not the quiz. The difference is what happens after the answer.

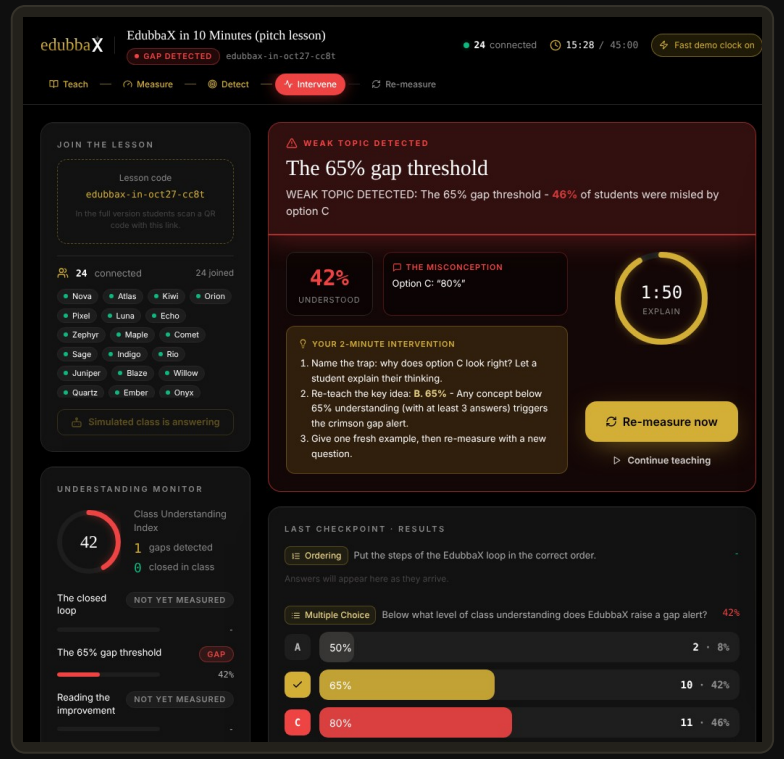

THE PRODUCT

See it work: measure, detect, intervene, in one lesson.

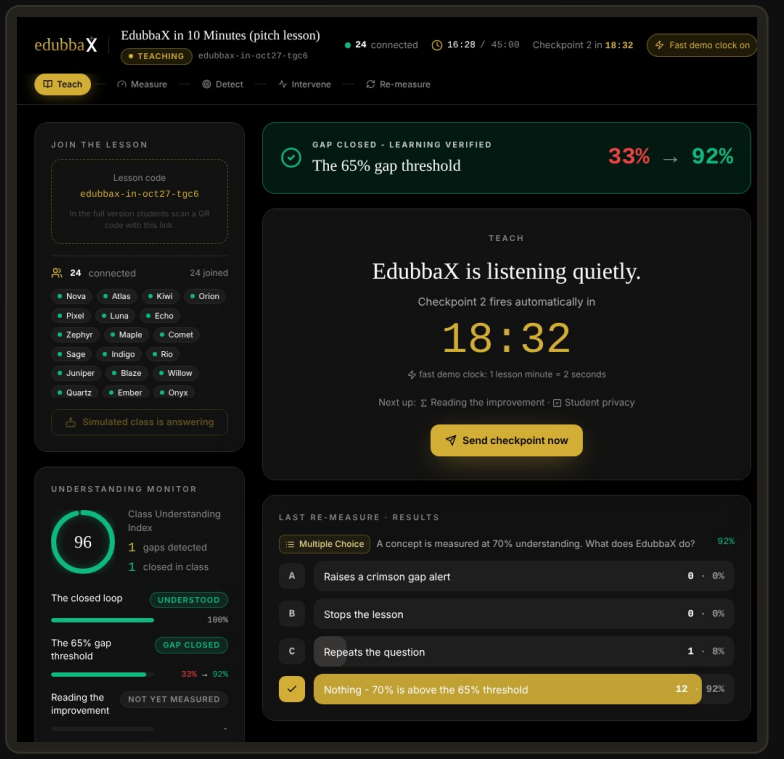

1 **MEASURE**

Live checkpoint, answers arriving

2 **DETECT + INTERVENE**

Gap alert with a 2-minute plan

3 **RE-MEASURE**

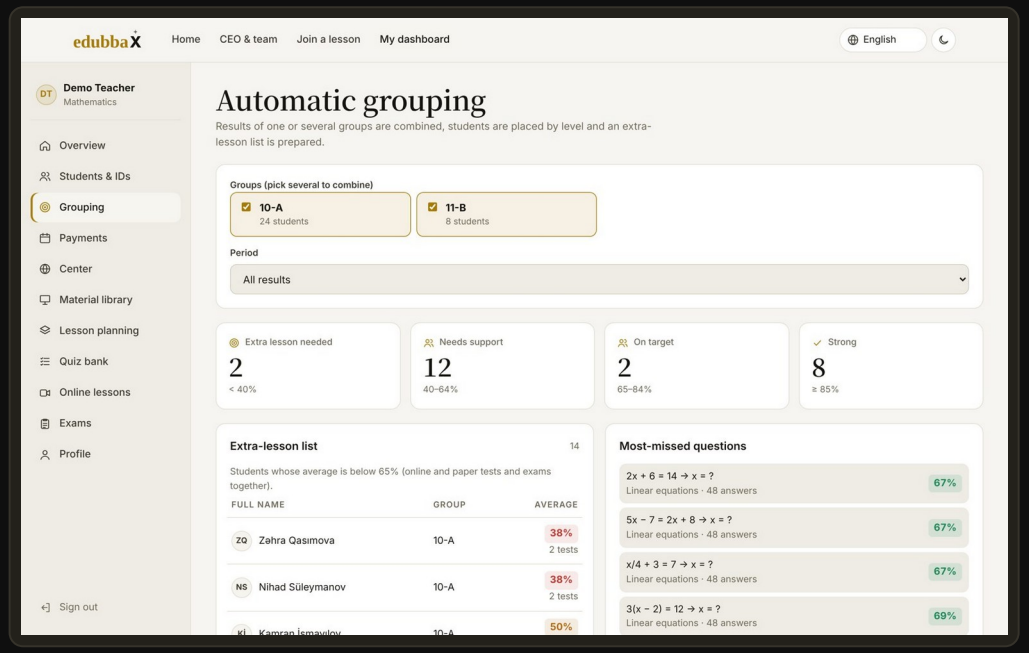

Gap closed, learning verified

Screens captured from the working EdubbaX build. Demo mode uses a simulated class of 24 students; a fast demo clock compresses a 45-minute lesson.

THE PLATFORM, BUILT TODAY

One platform for the whole lesson cycle.

- **AI questions and lesson plans**
  From PDF, Word, PowerPoint or images
- **Timed in-lesson checkpoints**
  Spread evenly across lesson parts
- **Live understanding map**
  Answers appear in real time
- **Paper tests**
  AI reads a photo, teacher confirms
- **Open questions**
  AI suggests a grade, teacher decides
- **Automatic grouping**
  Extra-lesson list for those who need it
- **Parent report**
  A private link for each student
- **Teacher rating (B2B)**
  Centres compare teachers; method is a proposal
- **Centre panel**
  Roles, totals, payment tracking
- **Online classroom**
  Video link, board, chat, raise hand
- **Student ID login**
  No account, any device
- **Multilingual**
  AZ, TR, RU, EN live; AR and ZH in preparation

Teacher dashboard: automatic grouping and the extra-lesson list

Teacher rating is a proposal, not an approved method.
Weights will be agreed with teachers and an assessment specialist in the pilot; ratings built on fewer than 3 lessons are flagged as unreliable.

WHY IT WORKS

The loop is built on what the evidence already says works.

+6 months

average additional progress from effective feedback, rated “high impact for very low cost” with high evidence security.

Education Endowment Foundation, Teaching & Learning Toolkit: Feedback

Retrieval practice

Being tested on material improves later retention more than re-reading it. EdubbaX turns that testing effect into short in-lesson checkpoints and a same-lesson re-measure.

Roediger & Karpicke, “Test-Enhanced Learning”, Psychological Science, 2006

Our hypothesis, to be proven in pilots: closing a gap inside the lesson beats finding it after the test.

POSITIONING

Not another LMS. Not another quiz.

	Legacy LMS	Quiz tools	Formative platforms	EdubbaX
AI-assisted question generation from uploads	–	–	–	✓
Real-time live response dashboard	✓	✓	✓	✓
Zero-friction student access (no logins)	–	✓	–	✓
Same-lesson intervention and re-measure loop	–	–	–	✓
Post-lesson pedagogical recommendations	–	–	✓	✓

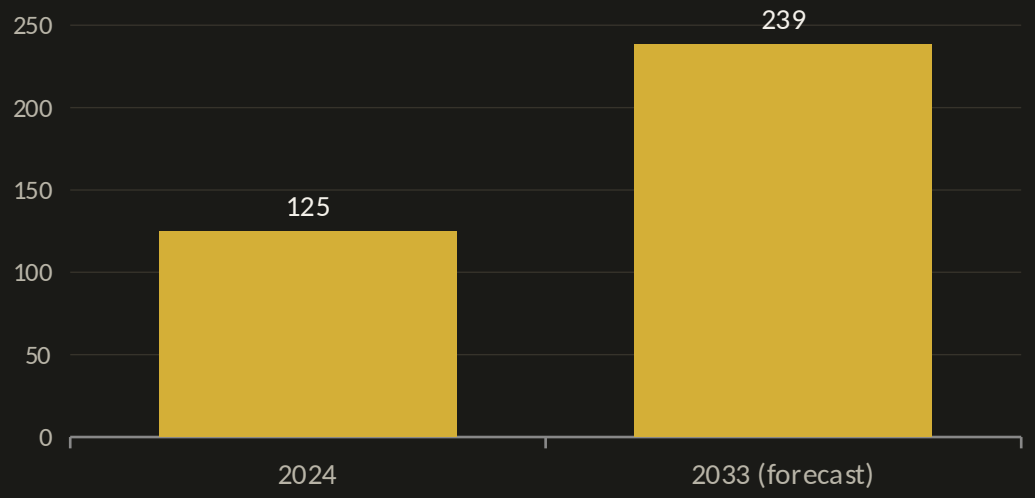

The difference is not the quiz. The difference is what happens after the answer.

Category comparison based on typical product capabilities; individual products vary.

MARKET

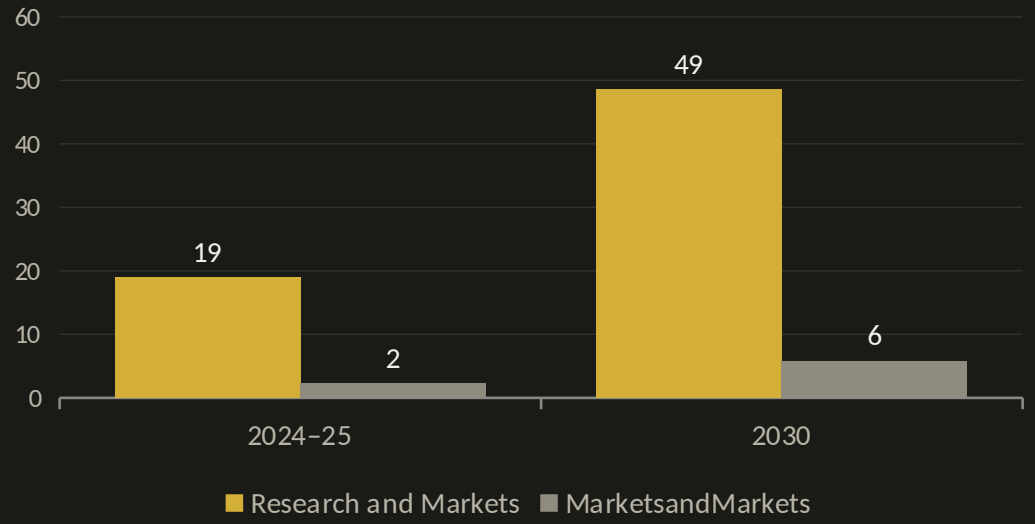

A focused entry point into a very large, growing market.

Global private tutoring, $B

Source: IMARC Group

AI in education, $B (two publishers)

Sources: Research and Markets; MarketsandMarkets

BEACHHEAD

Independent tutors and educators using digital tools, starting in Azerbaijan, then Turkey.

EXPAND

Tutoring centres, private schools and courses.

LATER

K-12 and university institutions; public sector only long-term.

The spread between publishers (about $2B to $19B) shows how much definitions differ. Third-party ranges, not our serviceable market; a bottom-up SAM from pilot data will follow.

WHY NOW

Teacher-first products have already won at global scale.

MAGICSCHOOL

$45M

Series B, Feb 2025, led by Valor Equity Partners. 6M+ educators signed up, 10,000+ partner schools, used in 160 countries.

MagicSchool blog, Feb 2025

PHYSICSWALLAH

Rs 3,480 cr

IPO, Nov 2025 (India). FY25 revenue Rs 2,887 crore and 4.46M paid users, built around a teacher-led brand.

Value Research, IPO analysis

NEARPOD

Acquired

Interactive lessons with formative assessment, used in 163 countries; acquired by Renaissance in 2021. Price was not disclosed.

EdWeek Market Brief, 2021

Lesson: win the teacher first, then expand to centres and institutions. EdubbaX adds what none of them closes in the same lesson: detect, intervene, re-measure.

POSITIVE IMPACT

Better lessons, less burden, and every student counted.

TEACHERS

Less guesswork

Gaps surface in the lesson, not after hours of marking. Context: OECD teachers work about 41 hours a week, and 19% report a lot of stress (TALIS 2024).

We will measure: prep and marking time, before and after

STUDENTS

Everyone is seen

Every student answers, not only the few who raise a hand. Weak topics are closed before they compound.

We will measure: gap-closure rate per lesson

PARENTS

Clear, private insight

Each child gets a private report link. No accounts for parents, no shared codes, no public names.

We will measure: parent report opens

PRIVACY

Safe by design

Students join with an ID or nickname. No e-mail and no password, so no student account to protect.

Formal legal review is budgeted in the raise

Exploratory, Baku: a rotational distance-learning concept would need exactly this layer, live visibility of understanding on remote days. A policy idea from our research note, not a tested result.

BUSINESS MODEL

A recurring revenue model designed to scale.

Freemium / Pilot

Free

TARGET

Independent tutors

Core intervention loop with limited AI generation, to experience the value.

Pro

$15–39 / mo

TARGET

Heavy-use tutors and private educators

Expanded AI generation, advanced learning analytics, parent reporting, unlimited lessons.

Centre / Institutional

$150 / mo – $10k / yr

TARGET

Tutoring centres, schools, universities

Multi-teacher centre panel, roles, payment tracking, teacher rating (proposal), security and governance.

Proposed pricing targets, to be validated in pilots. No revenue is claimed today.

GO-TO-MARKET

Win nearby markets first, then the Turkic world and MENA.

1 — 2 — 3 — 4

NOW

Azerbaijan

Pilot and first paying centres.

6–12 MONTHS

Turkey

2,700+ licensed courses; close language.

12–18 MONTHS

Central Asia and the Gulf

Turkic languages and Russian; Saudi Arabia, UAE.

LATER

English-speaking markets

Australia (test), Europe, the Americas.

WITHIN EACH MARKET

Independent tutors → **Tutoring centres** → **K-12 and universities**

Bottom-up: educators adopt first, invite students and parents, and bring EdubbaX into centres. Languages live: AZ, TR, RU, EN; Arabic in preparation.

MOAT AND METRIC

Every lesson makes the learning system smarter.

NORTH STAR

Meaningful Learning Interventions (MLI)

An MLI is a completed loop: question delivered → gap detected → intervention → understanding verified.

We measure value by how often a teacher actually closes a gap, not by logins or quizzes sent.

THE COMPOUNDING MOAT

Workflow lock-in

EdubbaX becomes part of the daily teaching routine, replacing manual quiz prep.

Pedagogical intelligence

Connects what was taught, what was misunderstood and which interventions worked.

Data flywheel (to be built)

With scale, the system learns which explanations close which gaps fastest. This advantage grows with usage; it is a goal, not a claim.

ROADMAP

From real-time assessment to education infrastructure.

V0

Real-time learning measurement

Built: working prototype

V1

Group intelligence

Class-wide analytics; grouping already started

V2

Adaptive AI teaching

AI-powered personalisation

V3

Classroom intelligence

School-level dashboards

V4

Gamified learning

Engagement layer

LATER

Institutional LMS and hardware

Long-term vision

Funding focuses on V0 to V1. Later stages are direction, not committed scope.

TRACTION, HONESTLY

What is built, who is waiting, and what the next 90 days prove.

47

teachers on the waitlist

Signed up before launch; no revenue yet.

BUILT TODAY

- Working prototype of the full loop: AI questions, live checkpoint, gap alert, re-measure
- 21 question types; 65% gap threshold with misconception alert
- Student phone view with ID login, no account
- Dashboard, grouping, paper tests, parent reports, centre panel
- Interface in AZ, TR, RU, EN

DAYS 1–30

Onboard

Recruit the pilot cohort from the waitlist and run first lessons.

DAYS 31–60

Run and measure

Track MLIs per lesson and gap-closure rate; measure prep time before and after.

DAYS 61–90

Test and publish

Test willingness to pay at Pro tier, publish findings, size the market bottom-up.

SUCCESS METRICS (TARGETS, NOT RESULTS)

MLIs per lesson · Gap-closure rate · Week-2 and month-2 retention · Willingness to pay

Demo mode runs a simulated class. We would rather show you an honest demo than invented traction.

TARGETS WITH THE ROUND

What this round delivers in 12 months.

20

paying centres

15 in Azerbaijan + 5 in Turkey

200

active teachers

Using EdubbaX every week

≈ $3,000

monthly revenue

Proposed pricing, to be validated

Proof

of learning gain

Gap-closure rate verified through MLIs

HOW THE 12 MONTHS RUN

Months 1–6
Azerbaijan pilots, first paying centres

Months 6–12
Turkey pilot and first paying centres

Months 12–18: prepare Central Asia and the Gulf (Turkic languages, Russian, Arabic).

Targets, not results. Pilot data will replace every assumption on this slide.

TEAM

Built by education and systems experts.

Omar Heydar

Founder & CEO

Vision, strategy, go-to-market. B.Sc. SABAH Groups, Baku State University; M.Sc. Azerbaijan Technical University, Organization and Management of Business.

Leila Huseinova

Chief Academic Officer

Pedagogical architecture, assessment methodology. B.A. SABAH Groups, Baku State University; M.A. Baku State University, Assessment and Monitoring in Education.

ST

Sanan Tagiyev

Chief Financial Officer

SaaS unit economics, financial strategy. Academy of Public Administration; TU Dresden, Public and International Economics.

AH

Agha Huseyn

Chief Analyst Officer

Systems analysis, AI and data architecture. Moscow State University; ASOIU, Information Systems and System Analysis (PhD).

Every lesson should be measurable. Every teacher should have the intelligence to be understood.

THE ASK

The ask: $100,000 to prove the loop pays.

PRE-SEED ROUND

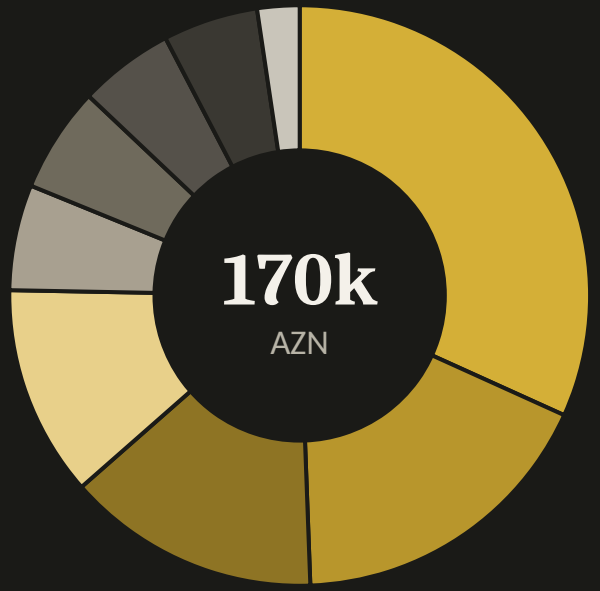

$100,000

≈ 170,000 AZN · **11% equity**

Pre-money	**≈ $809,000**
Post-money	**≈ $909,000**
Budget horizon	**12 months**

Status: working prototype, waitlist open (47 teachers), no revenue yet.

12-MONTH BUDGET

Developer (12 months)	54k
Founder, full time	30k
Turkey pilot	24k
Azerbaijan pilot and sales	20k
Security and payments	10k
Legal and company	10k
Cloud and AI	9k
Reserve	9k
Arabic / MENA	4k

Amounts in AZN. Next milestone: validated pilot results that prove MLIs are repeatable.

edubbaX

The future of education starts now.

Let's build it together.

Live demo: edubbax.vercel.app

The future of education is not just better content. It is better visibility into learning.

APPENDIX: ANTICIPATED QUESTIONS

Risks we see, and how we address them.

Risk	Why it matters	What we do
Teacher adoption	New tools get abandoned when they add work.	Upload your material, no student accounts, value inside one lesson. Pilot tracks week-2 and month-2 retention.
AI question quality	Wrong questions erode trust fast.	Teacher approves every question before it is sent; questions are grounded in the teacher's own material.
Big players copy features	Quiz and LMS giants can add a gap alert.	Win educators first; build intervention-to-outcome data; stay focused on the in-lesson loop.
Slow institutional sales	School buying cycles are long.	Start with independent tutors and centres who self-pay; approach institutions only after teachers already use us.
Student privacy	Children's data is highly regulated.	ID-only joining, no student accounts by design; formal legal review is budgeted in the raise.
Teacher rating is sensitive	Comparing teachers can feel unfair.	Method is a proposal; it is agreed with teachers and an assessment specialist in the pilot before any centre uses it.
New-market execution	Turkey and MENA need local language and sales.	Sequence by proximity: Azerbaijan, then Turkey; AZ, TR, RU, EN live, Arabic in preparation.
Proof of impact	Investors and teachers want outcomes, not features.	Pilot measures MLIs and gap-closure; we publish results, including weak ones.

APPENDIX

Sources and notes.

- Instructure / Hanover Research (2021): 94% of teachers use formative data, usually after the lesson (verify the exact wording before print).
- OECD TALIS 2024: 41-hour average weekly teaching workload; 19% of teachers report stress “a lot”.
- Education Endowment Foundation, Teaching & Learning Toolkit, Feedback: +6 months average progress, high evidence security, very low cost.
- Roediger & Karpicke (2006), Test-Enhanced Learning, Psychological Science.
- IMARC Group: private tutoring $124.5B (2024) to $238.5B (2033). Research and Markets: AI in education about $18.9B (2025) to $48.6B (2030). MarketsandMarkets: $2.21B (2024) to $5.82B (2030). Vendor estimates; definitions differ.
- MagicSchool: $45M Series B (Feb 11, 2025), Valor Equity Partners lead; 10,000+ schools, 6M+ educators, 160 countries (company blog).
- PhysicsWallah IPO (Nov 2025): Rs 3,480 crore issue; FY25 revenue Rs 2,887 crore; 4.46M paid users (Value Research). Nearpod acquired by Renaissance (2021), 163 countries, price not disclosed (EdWeek Market Brief).
- Waitlist: 47 teachers, as reported by the founder. Turkey: 2,700+ licensed courses, from EdubbaX market-entry research (verify before external use).
- Round: $100,000 for 11% implies about $909k post-money and $809k pre-money (arithmetic). It is a proposal for negotiation, not a market-validated valuation. AZN figures use about 1.7 AZN per USD.
- Baku rotational distance-learning concept: EdubbaX internal research note, exploratory. Screens: EdubbaX build, simulated class. Pricing, rating method and roadmap are proposals, not commitments.
